Crackling logs push out the blue flame in India's elite club kitchens

SHINE JACOB, AVIK DAS, SHIVANI SHINDE, VISHAL CHHABRIA, GULVEEN AULAKH, HEMANT KUMAR ROUT & ISHITA AYAN DUTT
Chennai/Bengaluru/New Delhi/Bhubaneswar/Kolkata, 23 March

PHOTO: BOWLING INSTITUTE WEBSITE

Bengaluru's Bowling Institute sent a notice to its members, telling them the food menu will be curtailed and, to tackle the challenging situation, asked them not to bring guests

Cutting consumption

- Across states, clubs are cutting out menu items that require heavy use of gas and oil, particularly deep-fried dishes, to reduce LPG consumption
- Kitchens are increasingly turning to electric alternatives such as induction cooktops, electric burners and microwaves, while some are also reverting to traditional firewood-based chulhas to keep operations running
- For some clubs, firewood cooking has become more than a stopgap. They are positioning wood-fired dishes as a distinctive offering, with members saying the food tastes better and clubs marketing it as a more traditional, experiential dining option
- Clubs that have largely avoided the supply crunch are those with piped gas connections, or those that depend on PNG rather than LPG

Along the busy stretch of Anna Salai, the arterial pulse of Chennai, Cosmopolitan Club is a parallel world, seemingly suspended in time. Its regal halls and verandahs, lined with Corinthian columns, stand as markers of an erstwhile colonial elegance. Beyond the architectural grandeur, this 153-year-old club also played a crucial role in the early currents of the Dravidian political movement.

Cut to 2026: the city's oldest club, with 5,900 members, is facing its biggest crisis since the pandemic years — a cooking gas shortage in its restaurants triggered by the West Asia war.

However, the club — which has withstood the test of time — is now adopting a three-pronged strategy to navigate the crisis: returning to firewood for select dishes, partially shifting to electric, and fine-tuning its menu.

The club has five restaurants and banquet halls, with an overall footfall of about 400 per day.

"A key step was to shift part of the cooking to traditional firewood, as we have enough open space available. In fact, members are enjoying this shift and claim that food cooked on firewood tastes better," said Sanjay Ramaswami, president of Cosmopolitan Club.

The staff canteen is now completely dependent on firewood. "Simultaneously, we have identified items that can be cooked using deep fryers and procured them. We also augmented our stock of electric burners. And like other clubs, we have cut down on menu items that consume a lot of gas," Ramaswami told *Business Standard*.

Caught between scarcity and necessity, clubs — heritage and popular — are navigating the fuel supply crunch. The Madras Gymkhana Club is also in firefighting mode to keep its restaurants running. "We don't have an emergency situation as such; we already had some induction stoves," said S Seshadri, president of Madras Gymkhana Club.

However, the club has dropped some traditional, oil-intensive dishes such as live dosa counters and puris, and even

scaled back parties. "We have also shifted Sunday biryani to wood fire. We are looking to switch largely to electric in the near to medium term, except for dishes that require gas," Seshadri added.

Madras Club, the second-oldest social club in India, upgraded its kitchen immediately after the crisis began. "We have upgraded the kitchen to use more electric cooking than liquefied petroleum gas (LPG) stoves. We have cut down on the menu and are using alternative sources like firewood and baking," said Brigadier Suresh Kumar VSM (Retd), general manager of Madras Club.

Dosas and deep-fried foods appear to have taken the biggest hit — unsurprisingly. At Bengaluru's Bowling Institute, dosas were put on hold last week before resuming a couple of days later.

The club's kitchen typically needs about nine cylinders a day to serve food and beverages, but is currently operating with four to six due to the LPG shortage. "Cylinders that cost about ₹1,800 are now being procured at ₹4,000-5,000 per cylinder," the club's Honorary Secretary Srikanth H S said.

Last week, the club sent a notice to members saying that while dine-in ser-

VICES would continue, the food menu would be curtailed. It also restricted take-away orders; suspended bulk food preparations, parties and banquet bookings; and asked members not to bring guests to manage the situation, according to a notice seen by *Business Standard*. "We had sent a circular as a precaution, but may relax it again," Srikanth added.

In Kolkata, the Tollygunge Club — "Tolly" to most — is leaning more heavily on electric appliances to navigate the gas crunch. "We already had a lot of appliances; we are just deploying them more," said Brigadier V Ganapathy (Retd), the club's chief executive officer.

The adjustments have extended to the menu, with a few items taken off for now. "We've trimmed the menu," Ganapathy said, adding that it is not a busy season for clubs.

Kasturi Raha, the president of Calcutta Club said, "It's difficult; we are coping with the current situation as best we can. We have cut down the menu in the dining hall, and the outlets have done the same."

The story repeats at one of South Mumbai's premier clubs, where all three restaurants are open but the menu has been curtailed. The nearly seven-decade-old club, which offers a wide

range of sports facilities and banquet services, has been partly affected as it still depends on gas cylinders instead of a piped gas connection.

A member of Mumbai Cricket Association Club, a premier sports and recreation facility, said the Chinese restaurant was temporarily shut. "We checked if services were impacted — the Chinese restaurant is closed, but members can access similar offerings at other restaurants," the member said.

In Mumbai's Khar and Bandra suburbs, piped gas has emerged as a lifeline for several well-known clubs. Members include sports personalities from cricket, tennis, billiards and swimming, as well as film stars.

Executives from clubs that have been around for 90-95 years said they are not facing major issues as they rely on piped gas connections. A senior executive at Delhi Golf Club said its two restaurants operate on piped natural gas (PNG) and were therefore not affected by the LPG shortage. "We're operationally prepared and have contingency plans in case of any PNG supply constraints. But so far, it's been normal."

Members of one of Delhi's oldest clubs, Gymkhana Club, have not experienced any cut in services or changes to the menu.

Kanwal Walli, secretary-general at India International Centre, a key venue for events in central Delhi, said the kitchens continue to run as usual using PNG.

While Indraprastha Gas has issued an advisory suggesting judicious use, there has been no change in the scale of services or food availability. Events also continue, with no cancellations reported so far.

Bhubaneswar Club, which relies on commercial LPG cylinders, has had to make major adjustments. It has temporarily suspended party bookings and limited restaurant services. Alternatives such as induction stoves, microwaves, and traditional "kath chulha" are being used to sustain operations.

Lalit Das, the club's secretary, said: "We have attempted to turn the constraint into a culinary experience, inviting patrons to savour dishes prepared on traditional wood-fired chulhas, known for their distinctive aroma and flavour. Members can enjoy a new experience with such offerings," the retired IPS officer told *Business Standard*.

Faced with constraints, clubs are improvising and adapting.

Fewer than 20% colleges achieve strong placements: Report

AUHONA MUKHERJEE
New Delhi, 23 March

Fewer than 20 per cent of higher education institutions in India manage to place more than 75 per cent of their students within six months of graduation, despite employability emerging as a key focus under the National Education Policy (NEP) 2020, according to a report released on Monday by TeamLease EdTech.

The report, titled 'From Degree Factories to Employability Hubs', highlights persistent gaps between academic outcomes and labour market expectations, even as universities and colleges increasingly prioritise job readiness.

Strong placement outcomes remain limited. Only 16.7 per cent of institutions reported placement rates of 76-100 per cent within six months of graduation, while 31.6 per cent placed between 51 and 75 per cent of students. At the other end, nearly 29 per cent reported placement rates below 25 per cent, underscoring wide disparities in employment outcomes across institutions.

India's higher education system has expanded rapidly over the past two decades, with thousands of institutions enrolling millions of students each year. Yet, the report notes that the shift from degree-focused education to employability-driven learning remains uneven.

"There is growing consensus that employability must be embedded within academic design rather than addressed at the margins. At the same time, the pace and depth of adoption

vary widely. Some institutions are beginning to build integrated employability systems, while others continue to rely on fragmented initiatives that struggle to scale," said Shantanu Roor, founder and CEO of TeamLease EdTech.

The report said higher education institutions must move beyond traditional classroom-based models and integrate practical exposure, internships and industry-linked training into academic programmes.

Only 8.6 per cent of institutions said their curricula are fully aligned with industry requirements across all programmes, while 16.9 per cent reported such alignment in select courses, according to the report. Taken together, roughly a quarter of institutions show some degree of industry alignment, suggesting that efforts to connect academic programmes with labour market needs remain limited and uneven, said the report.

Industry collaboration is expected to play a critical role in improving employability outcomes. Institutions with strong employer partnerships are better placed to adapt their curricula to market needs and offer students hands-on exposure. Internships are gradually becoming part of academic programmes, with 9.4 per cent of institutions offering them across all courses and 17.4 per cent providing them in select programmes, according to the report.

The report suggests that institutions may increasingly be judged not just on enrolment and academic performance, but also on placement outcomes and the long-term career progression of graduates.

Govt directs CGD firms to ensure PNG connectivity for schools, colleges in 5 days

SHUBHANGUI MATHUR
New Delhi, 23 March

The government has directed city gas distribution (CGD) companies to connect residential school and colleges, community and Anganwadi kitchens through piped natural gas (PNG) within five days, wherever infrastructure is available. "Amongst the vulnerable sections, for cooking fuel supply security, the Government has targeted hospitals, canteens, restaurants etc. where mass cooking takes place and need uninterrupted fuel supply," Petroleum and Natural Gas Regulatory Board (PNGRB) said in an order Monday, adding that hostels in universities and colleges of different discipline as well as private hostels are covered under the priority categories.

The state governments and Union Territories (UTs) have been advised to proactively

implement reforms aimed at fastening laying of infrastructure, including streamlining approval processes, rationalising local levies, and addressing cost-related bottlenecks, it added. A compliance report on connectivity should be submitted after five days and thereafter on daily basis, the regulator said.

The government is urging consumers to shift to PNG as the country is hit by liquefied petroleum gas (LPG) crisis due to the ongoing West Asia conflict. Amid the LPG shortage, the government has prioritised LPG for domestic consumption while cutting allocation for commercial users.

On March 21, the government announced an additional 20 per cent allocation of commercial LPG to states, bringing the total allocation to 50 per cent, as several businesses are hit by the recent cooking gas crisis.
